

# QUALITY MANAGEMENT SOFTWARE (QMS)

## Gain Visibility & Control Over Your Programs

Quality Management Software gives operators and managers control over their programs by making safety and quality data instantly accessible from any device. Achieve ongoing compliance with regulatory, customer, and third-party certification (ISO, SQF, BRC, FSSC-22000, HACCP, and more) requirements with SafetyChain.

## Reduce The Cost Of Quality

Reduce the cost of quality with accelerated pre-op and sanitation activities with mobile forms. Use production data to identify and address startup issues for time savings and consistent on-time line starts. Quickly pinpoint non-conformances and trends through data analytics, perform root cause analysis, and decrease resolution time for CAPAs. Allow supervisors to perform direct observation verifications to further increase time savings.

### Key Benefits

Increase efficiency

Save time

Eliminate paper

Improve on-time shipments

Ensure compliance

Accelerate spec verification

Ensure regulatory & GFSI compliance

Access SOP & spec data

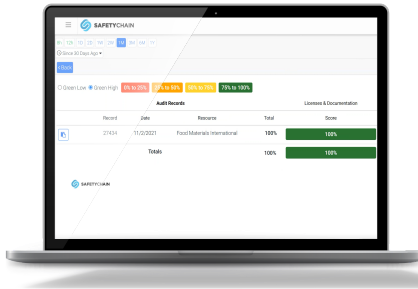

Reduce cost

## Automate Audits

Automate internal and external audits with paperless recordkeeping and always be audit-ready. With mobile and automated data collection, all program records are available for personnel to review, sign off, and quickly report on as needed. Create secure profiles to share only specific records with auditors, enabling remote audits and simplifying onsite audits. Plus, identify and address risks to enhance performance on audits and understand potential hazards in your supply chain. Be ready for oversight by customer, certification, or regulatory audits 24/7 with secure profiles.

## Reduce Scrap, Waste, Rework & Product Holds

Control scrap and waste by uncovering trends and correlations in data to identify where quality issues lie and reduce out-of-spec product. Receive real-time notifications immediately after a check is missed or failed to promptly address quality issues and minimize rework. Monitor quality trends to identify and prevent recurring issues, allowing for a proactive approach that reduces product holds.

### QMS Includes

**PROGRAM COMPLIANCE DASHBOARD**

**HACCP & FOOD SAFETY CHECKS**

**RECORD SIGN OFF & REPORTING**

**DOCUMENT REPOSITORY**

**BULK RECORD REVIEW & VERIFICATION**

## About SafetyChain

SafetyChain is the #1 Plant Management Platform that improves yield, maximizes productivity, and ensures compliance for process manufacturers. Trusted by over 1,500 facilities, SafetyChain is the only enterprise solution uniting production, quality, safety, and supplier management.
